

Chew
gels™

Innovation in **OTC**
for better **consumer**
acceptance

 **Sofgen**
PHARMACEUTICALS

An explosive experience with our Innovative technology

As patients and consumers continue to seek for novel formats that deliver a completely new experience, **CDMOs** need to understand what consumers prefer in terms of oral dosage forms and try to satisfy those needs through innovative options. **OTC** and **Nutritional Products** are purchased by consumers based on their perceived value in addressing **their health conditions or maintaining good health.**

At Sofgen we take those needs into consideration and transform them into ideal technologies and **Chewgels™** is a clear example of that.

Our **Chewgels™** technology consists of a **chewable capsule** that delivers an active ingredient without the need of water and with a delicious flavor making it a **convenient, portable, on-the-go solution.**

We are leveraging techniques widely accredited in the food industry and adapting them to our pharmaceutical standards, achieving the desired chewability, texture and flavor experience on our Chewgels technology.

Some of the benefits of **Chewgels™** include:

Shell **Solubility and Stability** Assurance.

With our **Chewgels™**, the fill content may contain **solutions, suspensions, pastes and emulsions.**

We have the ability to select the right **gelatin and appropriate excipients** to hold the **ingredients and the flavouring.**

Lipid coating of the API for special taste masking applications.

Innovation in **OTC products** with **Chewgels™**
